Abstract: This presentation will introduce the MLI product assessment system and proceed to define the role students, teachers, assessors, and administrators play in the process. The focus will be on how the use of technology has significantly aided and improved the MLI's portfolio-type process and product assessment procedure. The presenters will "walk through" the system's processes, including product submission, assessment, and data storage, and demonstrate step by step how technology has met the needs of this type of assessment system.

Overview of Assessment Process

The benefits of technology in Student Product Assessment

Immediate Access to Centralized Data

- ✓ Marks entered to centralized location
- ✓ Immediate access to marks

Comprehensive Data

- ✓ Class and student reports
- ✓ Program statistics

Accurate Grades

- ✓ Computerized mark averaging
- ✓ Human error reduced

Online Interface

- ✓ Convenient and consistent access
- ✓ Dynamic & modifiable
